## What is Emulsifying Ointment?

Emulsifying ointment is a paraffin-based topical preparation used to prevent or relieve dry skin conditions.

## Indication

1. As soap substitute
2. As emollient

## How does it work?

Emulsifying ointment can be used as soap to prevent dry skin conditions. It can also reduce water loss from skin, thus giving a moisturizing effect.

## How to use?

### As Soap Replacement

1. Wet the body first.
2. Apply directly on the skin or rub the ointment with warm water between your palms, then apply to the entire body (except face and scalp).
3. Rinse off with water. Leave a thin layer of ointment after rinsing.

### As Emollient

Apply directly on the skin, preferably within 5 to 10 minutes after bath; further rinsing is unnecessary.

## Precautions

1. For external use only. Avoid contact with the eyes.
2. Use the medication as directed by your doctor.
3. If you have history of drug allergy, consult your doctor or pharmacist before using the medication.
4. Discard all medications that have expired or are no longer required.
5. Do not share the medication with other people.
6. Tell your doctor and pharmacist if you are pregnant, planning to become pregnant, or breastfeeding.
7. Please consult your doctor if symptoms persist or worsen after using the medication.
8. Clean the bath tub thoroughly if the ointment is used as soap substitute to avoid possible slip-and-fall.
9. Keep away from flames and do not smoke, as dressings and clothing soaked with the ointment can be easily ignited.
